

Diagnostic Workout Report

Kinematic Analysis & AI Coaching Assessment

Patient / Subject ID	Anonymous (N/A)	Session Date	2026-05-03T17:07:02.509232
Total Duration	1.6 Minutes	Muscles Targeted	glutes, hamstrings, quads

1. Quantitative Metrics summary

2	13	79 / 100	7.4s
Exercises	Total Repetitions	Mean Tempo Score	Avg Sec / Rep

2. Kinematic Activity Timeline

Squat LegCurl Null

3. Exercise Diagnostics

Exercise	Time	Sets x Reps	Tempo	Diagnostic Flags
LegCurl	00:00 - 00:24	1 sets (4)	79	■ Fatigue at Rep None
Squat	01:12 - 01:38	1 sets (9)	79	■ Fatigue at Rep 4

4. Clinical Coaching & Prescription

✓ STRENGTHS ** • Your average tempo score was **79** / 100, indicating solid control of movement speed across both exercises. • You completed **90 %** of the squat reps, showing strong endurance on the primary lowerbody lift. ** ↑ IMPROVEMENTS ** • Fatigue was detected on the **Squat** starting at rep **4**; aim to pause briefly (1■2 s) at the bottom of each rep after the 3rd rep to reset form and delay fatigue onset. • The Leg Curl only reached **40 %** completion (4 reps) and showed fatigue without a clear onset

point—reduce the load by ~5–10 % and add a second set to build volume safely. ** → NEXT SESSION ** Focus on the same three muscle groups—glutes, hamstrings, and quads—but increase total volume to **3 sets** per exercise (e.g., 8–10 reps for Leg Curl and 8–12 reps for Squat). Keep rest intervals around **60–90 seconds** to improve metabolic stress while still allowing recovery, targeting a new null-time percent of **30 %** (down from 49 %). Maintain the tempo score around 79 by using a 2–0–2 cadence (2 s eccentric, no pause, 2 s concentric). Since you're aiming for hypertrophy, ensure post-workout protein intake of **20–30 g** within 45 minutes and stay hydrated. ** ★ ** Great job, Het—your strong squat execution (90 % reps) shows you're on the right track toward building serious lower-body muscle mass!
