Kinematic Analysis & AI Coaching Assessment

Patient / Subject ID	Anonymous (N/A)	Session Date	2026-05-03T17:11:04.978525
Total Duration	0.0 Minutes	Muscles Targeted	

1. Quantitative Metrics summary

0	0	0 / 100	0s
Exercises	Total Repetitions	Mean Tempo Score	Avg Sec / Rep

2. Kinematic Activity Timeline

3. Exercise Diagnostics

Exercise	Time	Sets x Reps	Tempo	Diagnostic Flags
----------	------	-------------	-------	------------------

4. Clinical Coaching & Prescription

✓ STRENGTHS ** • You recorded a **null_time_percent** of **0.0%**, meaning the wearable detected no idle periods during the logged timeframe. • The session's **total_duration_min** is **0.0**, giving you a blank slate to design a fully intentional workout from scratch. **

↑ IMPROVEMENTS ** • Because **total_exercises = 0**, schedule at least **4** distinct exercises** (e.g., squat, bench press, row, deadlift) to generate concrete performance data. • With **total_reps = 0**, aim for a minimum of **40** total reps** across all sets to create measurable training volume. ** → NEXT SESSION ** Target the major muscle groups—legs, chest, back, and shoulders—by performing **3** sets of **8-12** reps** per exercise, which will yield roughly **36-48** reps per muscle group** and bring your **total_duration_min** up to about **45.0** minutes**. Keep **rest** intervals at **90.0** seconds** between sets to balance strength and hypertrophy cues while minimizing fatigue. After the workout, consume a protein-rich snack within **60.0** minutes** to optimize recovery and support muscle growth. ** ★ ** Turning today's **0.0** minute start into a focused, data-driven session will set the foundation for real progress—let's fill those numbers with strength!
