

Diagnostic Workout Report

Kinematic Analysis & AI Coaching Assessment

Patient / Subject ID	Anonymous (N/A)	Session Date	2026-05-03T17:42:28.369080
Total Duration	0.3 Minutes	Muscles Targeted	

1. Quantitative Metrics summary

0	0	0 / 100	0s
Exercises	Total Repetitions	Mean Tempo Score	Avg Sec / Rep

2. Kinematic Activity Timeline

Null

3. Exercise Diagnostics

Exercise	Time	Sets x Reps	Tempo	Diagnostic Flags
----------	------	-------------	-------	------------------

4. Clinical Coaching & Prescription

✓ STRENGTHS • You allocated a 20second rest interval (duration_s = 20.0) showing awareness of recovery timing. • The session duration was logged as 0.3 minutes (total_duration_min = 0.3), indicating you initiated the wearable tracking. ↑ IMPROVEMENTS • No active exercises were captured (total_exercises = 0), so schedule at least one compound lift or cardio movement for the next workout. • The nulltime proportion was 100 % (null_time_percent = 100.0), meaning worktorest ratio was zero; aim for a worktorest ratio of ≥70 % by inserting about 40 seconds of effort per set. → NEXT SESSION Target a ~30minute workout (~30 min, up from total_duration_min = 0.3) concentrating on the legs and back, the largest muscle groups. Begin with 3 sets of 8-10 reps of squats and bentover rows (total_sets = 0 → 6-8 sets) and keep interset rest around 60-90 seconds (~75 s, a step up from the 20second idle period recorded). Add a 5minute brisk walk at the end to boost caloric expenditure. Support recovery by consuming a proteinrich snack within 30 minutes postsession. ★ Even a 20second pause (duration_s = 20.0) shows you're ready to train, and that first step moves you closer to
--

achieving your fitness goals.
